

2018 BUSINESS SOLUTION

It is a crime, according to us, to not innovate or to deliver what is just enough.

ABOUT US

All about Innovation, People and Technology

Apar Innosys is a leading provider of information technology and consulting services and dedicated to helping the world's leading companies build stronger, new age, digital businesses.

Today's customers and employees are expecting a new style of commerce, content and collaboration that's social-, mobile-, analytics-, and cloud-enabled. They're looking for the same anytime, anywhere, and any-device convenience across applications. Traditional business processes, business models and even entire industries are being disrupted as products and services become ever-more digitized. This trend is placing new requirements and burdens on the corporation in terms of being able to collect, manage and interpret this information to support effective business decision-making.

Apar Innosys expertise helps corporations in deployment of SMAC-enabled applications and infrastructure with attention to three key areas: developing core skills around supporting the new work style of their customers and employees, understanding how to assess business processes for digital transformation, and, finally, addressing the upcoming information inflection point. Our teams accomplish this not only by dealing with the sheer scale and velocity of our customers' data streams by focusing on retooling the infrastructure and developing intelligent analytics to make smart decisions related to this information in addition to routine transaction processing.

MORE ABOUT APAR INNOSYS...

Apar Innosys is a part of the Apar Group, a billion dollar industrial conglomerate and managed by Basil Partners, a successful technology venture fund.

Technology Consulting

Headquartered in Singapore we partner with the IT industry to provide comprehensive cutting edge technology and business solutions. We aim to be a premier international software services and solutions company by providing the best value to clients, employees and associates in an honest, open and ethical environment.

Apar Innosys is one of Asia Pacific's leading organizations, providing technology consulting, software development and outsourcing services, with operations in 6 countries and development centers in Singapore, Japan, Malaysia and India.

Apar Innosys combines a passion for client satisfaction, deep industry and technology expertise and a global workforce delivering values.

Enterprise Solutions 01

For solutions that need deployment of hardware, software, mobile apps, cloud hosting, IT infrastructure and Support; company-wide, call us.

IoT, Big Data and AI 02

Combining real-time sensor data with environmental data we provide intelligence of higher order to all the stakeholders in the ecosystem.

Testing 03

We perform device validation like display test, audio test, Docking Stations, Bluetooth devices, HDD, Backup and Recovery, and Thunderbolt devices.

Application 04

Planning to modernize your applications? Stuck against a complex problem? Need to integrate multiple and scattered applications? Let us know.

Discover the Great Ideas

OUR SOLUTIONS

Most of our solutions are brewed with fresh ideas.

INTERNET OF THINGS

We cover the entire spectrum of IoT projects, from concept validation to providing an end-to-end IoT solution, including platforms and AI processors.

ANALYTICS AND AI

Big Data implies data analytics and data analytics implies AI processing. Bring to your domain the power of Big data processing with AI tools.

INFRASTRUCTURE

For a competitive edge, a robust, agile, always-available IT infrastructure is necessary to meet rapid growth in applications, platforms and new devices

GOVERNANCE AND SECURITY

When your project is one of Governance and implied security, you are best advised to talk to us. We can lead you in the right direction and save on costs.

TESTING

Across decades, we have established ourselves as leaders in product testing using and building a variety of test automation tools.

APPLICATION DEVELOPMENT

Applications for the web, for devices and for a wide range of domains. This is one of our specialties. Scalable

OUR SERVICES

LOGISTICS

Logistics and fleet management is all about collecting numerous field parameters and processing them along with peripheral and ambient data to arrive at conclusions on what needs to be done to gear up the fleet and its cargo. Our IoT solution can neatly cater here.

MANUFACTURING

Manufacturing facilities invariably generate a lot of sensor data that cannot be handled by humans or traditional computer systems. For instance, power consumption data will come from thousands of places and it is a tough question on how this data can be used to save costs.

ENVIRONMENTAL MONITORING

Monitoring environmental parameters, both natural and artificial, like power, temperature, door status, etc. also is a complex process governing large and scattered installations like elevators, ATMs and communication towers. Our IoT solution handles this large and complex data to produce action outputs.

CLOUD HOSTING

Leave it to us to plan, commission and manage cloud hostings where scalability and availability cannot be compromised. Working with the best of service providers we can get you going before you even realize it. We will stick to your costs and conditions.

MANAGED SERVICES

Do you have large and scattered installations that need to be managed on a 24 x 7 basis? We can not only equip these sites with automated monitoring and control tools but can also manage them on your behalf. Setting up call centers, manning and running them will all be our responsibility.

SERVICE DESK

Starting from just a few voice-in seats to complex video-wall fitted service desks, we can set up all kinds of Service Desks to suit your requirements and budget. After a detailed study of your requirements we will propose to you the most optimal solution to go with your terms.

SUPPORT

Application Packaging, Development-Test-Acceptance-Production, DevOps, Enterprise Mobility, Database Management and Application Management are some of the services we render. Inadequate monitoring and tracking tools and lack of expertise make it difficult to effectively manage business-critical applications.

DEVICE TESTING

We are equipped to perform a wide range of testing including Manual Testing, Functional Testing, Compatibility Testing, Performance Testing, Stress testing, Regression Testing, Website Testing, Automated Testing. A large dedicated test team is available across several countries.

SOFTWARE TESTING

We do static and dynamic testing and also box testing like White-box, Black-box and Grey-box testing. Testing levels include Unit, Component interface, System and Operational acceptance testing. We use Traditional waterfall development model as well as Agile or Extreme development model

TEST AUTOMATION

INSPINIA Admin Theme is a premium admin dashboard template with flat design concept. It is fully responsive admin dashboard template built with Bootstrap 3+ Framework, HTML5 and CSS3, Media query. It has a huge collection of reusable UI components and integrated with.

CYBER SECURITY

Cyber risk features among the top business risks for most organizations, requiring them to adapt to the ever evolving threat landscape proactively. Innosys cyber security consulting practice helps organizations assess their security posture and remediate potential cyber threats.

INTRUSION AND HACKING

Intrusions into computer systems are real threats to businesses, especially loss of sensitive data like commercial tenders, customer data files, drawings, models, diagrams and e-mails. Intrusions often leave traces that we can detect, just like in any other crime.

ISMS

Innosys information security services protect your business from data breaches, negative publicity, damaged credibility and disruption of services. We deliver world-class offerings, security knowledge and experience to provide you with comprehensive information security.

RISK ASSESSMENT

We identify and measure information security risks in your organization. We first identify the steps to a Secure Organization, define a strategy, establish security policies, implement a security system, create awareness amongst users and finally monitor results

APAR INNOSYS LLP

We are always listening, our ears to the ground, to understand your needs better and to learn from you. Feel free to share with us, your opinions, concerns or your appreciation of our work. We will feel delighted.
